SafetySense
CALLS FOR HELP WHEN YOU CAN'T

ATTACHMENT 1 OF 5 · TEAM BIO

Who's building SafetySense

A two-person, brother-and-sister team across UNM and CNM. We're building a personal-safety app that gets help to a student when they can't reach their phone.

App **SafetySense** Team **George & Mary Teifel** Schools **UNM · CNM**

GT

George Teifel

LEAD DEVELOPER · IOS & BACKEND

SCHOOL	University of New Mexico (UNM)
YEAR	Senior
MAJOR	Electrical Engineering
EMAIL	gteifel@unm.edu

Built the SwiftUI iOS prototype (on-device sound and speech detection, the escalation ladder, widgets and Live Activity), the Supabase backend, the Twilio and Noonlight integrations, and the contacts' live-location page.

WHY WE CARE

Panic buttons assume you can reach one. George wants a tool that still works for a friend who has frozen, been drugged, or lost their phone.

MT

Mary Teifel

CO-FOUNDER · RESEARCH, UX & CONTENT

SCHOOL	Central New Mexico Community College (CNM)
YEAR	Freshman
MAJOR	Mechanical Engineering
EMAIL	[FILL IN: email]

Owns user research with UNM and CNM students, the trauma-informed wording across the app, the onboarding flow, and the support and resources screens.

WHY WE CARE

Mary wants every student, at CNM as much as UNM, to have a safety tool that respects their privacy and never blames them.

01 What we've built so far

iOS app
Working SwiftUI prototype for iOS 26: onboarding, Guard sessions, check-ins, alert ladder, Vault and Support.

Live backend
Supabase edge API, Postgres, Vault and a heartbeat watchdog. Twilio voice calls to verified contacts work today.

Live link
A page for trusted contacts, no app needed: live location, status, and "I'm on my way" or "Send help".

HOW WE SPLIT THE WORK

George owns the engineering. Mary owns what users see and hear: research, wording, and flows. We review every screen together, with one test: *would this feel safe and respectful to someone on the worst night of their life?* SafetySense supplements 911. It never replaces it.
